EclecticIQ **FLASHPOINT**

Act Decisively with EclecticIQ Intelligence Center and Flashpoint Ignite

Rely on trusted, actionable intelligence from Flashpoint to proactively defend your organization with EclecticIQ Intelligence Center.

The Challenge

Security teams are overwhelmed with unverified intelligence, fragmented data sources, and evolving adversary tactics, making it difficult to detect, investigate, and mitigate threats efficiently. Without real-time context and automated correlation, analysts struggle to filter out noise, attribute threats to known actors, and prioritize the most critical risks. Limited visibility into deep/dark web threats and active exploitations further slows response times, leaving organizations vulnerable to emerging attacks.

Joint Solution

Turn intelligence into action

Security teams can correlate threats, prioritize risks, and automate intelligence workflows within a centralized platform. By leveraging real-time intelligence on illicit actors, vulnerabilities, and active exploitations, analysts can move beyond static threat feeds to make data-driven decisions.

Enhance threat attribution & accelerate response

By linking Flashpoint's risk observables, deep/dark web insights, and threat actor profiles with EclecticIQ's investigative tools, security teams can identify attack patterns faster, attribute incidents to known adversaries, and take immediate containment measures to reduce impact.

Proactively identify & track emerging threats

Security teams can monitor illicit communities, underground forums, and high-risk industry threats in real time, leveraging Flashpoint's unique data sources to track evolving adversary tactics. This proactive approach enables organizations to preemptively detect and mitigate threats before they escalate into full-blown incidents.

Enable seamless collaboration and sharing

With a centralized intelligence hub, security teams, SOC analysts, and threat hunters can operationalize intelligence efficiently, ensuring that key insights are shared across teams and decision-makers. By automating enrichment and integrating intelligence into workflows, organizations gain a faster, more coordinated security response.

Key Use Cases

Enhanced threat detection

Security analysts need high-fidelity intelligence to improve threat detection and triage within their SIEM. By integrating Flashpoint's finished intelligence reports and technical intelligence (e.g., IOCs, TTPs, event data) into EclecticIQ, analysts can enrich the SIEM with curated intelligence. This improves threat correlation, reduces false positives, and accelerates detection of emerging risks.

Improved incident investigation

Security teams struggle to quickly understand an incident's full context, delaying response. By correlating Flashpoint's technical intelligence (e.g., threat actor profiles, events, TTPs) with existing incident data in EclecticIQ, analysts gain deeper visibility into threats. This enriched context enables faster, more effective investigations and helps uncover attacker tactics.

Faster attribution and response

Attributing attacks to specific threat actors and understanding their methods is crucial for timely response. By leveraging EclecticIQ's Graph and Flashpoint's event and attribute data, analysts can correlate TTPs with known actors, accelerating attribution and improving containment and response time.

Proactive threat hunting

Security teams need comprehensive, up-to-date intelligence to stay ahead of emerging threats. By integrating Flashpoint's detailed reports, technical intelligence, and external threat data into EclecticIQ, threat hunters gain enriched, contextual threat data to identify attack vectors, track adversaries, and stop threats before they escalate.

Prioritized threat monitoring

Determining which threats need immediate attention is a challenge, often slowing mitigation of critical risks. By integrating Flashpoint's risk intelligence (e.g., IOCs, event data) with EclecticIQ's prioritization algorithms, organizations can automatically assign risk levels to threats. This ensures analysts focus on high-priority threats first, reducing potential damage.

About EclecticIQ

EclecticIQ is a global provider of threat intelligence technology and services that empower customers to neutralize critical cyber threats to their business. Guided by our values — being curious, bold, accountable, and collaborative — we help security teams make smarter, faster decisions with dynamic solutions that reduce complexity and streamline threat detection and response.

About Flashpoint

Flashpoint Ignite is a threat intelligence platform delivering real-time, high-fidelity insights from open, deep, and illicit web sources. It provides actionable intelligence on emerging threats, vulnerabilities, and attack patterns, helping organizations proactively monitor, detect, and respond to cyber risks with data on IOCs, TTPs, and threat actor activities.
